sequences, a NotI restriction site, a ribosome binding site (RBS), a page B leader, a spacer region, a cloning region bordered by 5 XhOI and 3' SpeI restriction sites the tether sequence, the sequences encoding bacteriophage cp3 followed by a stop codon, a NheI restriction site between the two cassettes, and a second lac2 promoter/operator sequence, followed by an expression control RBS, a PelB leader, a spacer region, a cloning region bordered by 5' SacI and 3' XbaI restriction sites, followed by expression control stop sequences and a second NotI estriction site. The pocom3 expression vector iorns the basic construct of the MT4 Fab display phagemid expression vector; pMT4-3 (see also 092540), used in the invention for the production of synthetic human Fab
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 2: Page 193-197; 249pp; English.

This sequence represents the expression vector, pPho-TT which is a modified version of the phagemid expression vector, pComb3 given in 992546 ppho-TT provides for the expression of soluble Pabs which are secreted into the periplasmic space which is regulated from the alkaline phosphatase (phoA) promoter. This plasmid was used within the scope of the invention to express various mutagenised human Fab's which comprise heavy and light variable regions which bind to HIV gpl20. ppho-TT
                                                                                                                                                                                                                                                                                                                                                                                                                                                        2674 geogageteacgeagtetecaggeaceetgtetttgtetecaggggaaagageeaceete 2733

consists of a DNA molecule having two cassettes to express two soluble proteins a heavy chain and a light chain. The vector comprises operatively linked 5' to 3', a first cassette consisting of the phoad promoter/operator sequences, an ECORI restriction site, a ribosome binding site (RBS), an OmpA leader, a Sfil restriction site, a spacer region, a coloning region bordered by 5' saci and 3' XBal restriction second cassette consisting of an expression control RBS, a PelB leader, a human consensus amino terminus spacer region comprising the sequence EVULLE, a cloning region bordered by 5' XMOI and 3' Spel restriction sites followed by a Sfil site, expression control RBS, a PelB leader, a human consensus amino terminus spacer region control stop sequences and a Noti restriction site. The PPho-TT expression vector contains a light chain stuffer that is 1200 bp in length and a heavy chain stuffer that is 300 bp in length. The nucleocitide sequences of the heavy and light chain variable domains of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4604 gecgageteaegeagtetecaggeaeetgtetttgtetecagggggaaagageeeeete 4663

Example 1; Page 84: 125pp. English.

T1520 and T15203 are the heavy and light chain variable domains of a human anti-tetanus toxoid immunoglobulin (Ig) encoded by a Pcomb3 based expression vector. The heavy and light chain variable domains are used in an example to demonstrate the prodn. of antibodies for an antibody library using mutagenic primers. Mutagenic primers of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 TCCTGCAGGGCGGGTGAGAGTCTTAGGAAAAAATAGTTAGGNTGGTAGTAAAAAGCT 120

oligo-nucleotides - used as PCR primers for producing increased diversity antibody libraries, for screening antigens claim 21: page 84-85: 120pp: English.

This sequence represents the light chain coding sequence derived from the surface display phagemid expression vector, pC3AP313. pC3AP313 contains the bacteriophage gene II and heavy and light chain variable domain sequences for encoding human hab antibodies against retains toxin This sequence was pref used in the method of the invention for the production of antibody libraries containing increased diversity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-APK-1995 (first entry)
Anti-tetanus toxoid light chain cDNA from vector, pC3AP313.
Polymerase Chain reaction, primer; mutagenesis: PCR: amplify;
diversity; antibody; complementarity determining region; CDR:
framework: constant: light; heavy; phage; immunoglobulin; library; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences given in 070480.86 are primers which were used for inducing mutagenesis in 1 mp.lementary determining region (508) of an immunoglobulin infinity and gene primers contain a 3' terminus capable of hybridising to a first framework region, a 5' terminus capable of hybridising to a second framework region and a nucleotide sequence between the 5' and 3' termini having the formula (NK)n, where n is 3-24. These primers may be used to produce antibody libraries with increased artibody directify by inducing matagenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 tgcagggrcaqtcacagtgttagcagggcctacttagcctggtaccagcagaaacctggc 120

invention have sequences at their 3' and 5' ends both capable of binding different framework regions linked by a sequence 6 to 50 nucleotides long offerent immunoglobulins produced using the primers may be used to produce antibody libraries having diverse and
                                                                                                                                                               novel immunospecificities and affinities. By using mutagenic ONS an extremely large population of different randomised binding sites can be created and use of the universal light rhain increases the number of combinations which jield functional heterodimeric antibodies. 01-NOV-1993 (first entry)
F105 rearranged variable region light chain.
Monoclonal antibody: MAb: envelope: glycoprotein: gp120: HIV: AIDS:
CD4: receptor: hybridoma: polymerase chain reaction; PCR: heavy: light:
              are displayed on the surface of filamentous phage particles comprising the library. These primers pref. mutate the light chain CLR3.
Sequence: 646 RP; 162 A; 187 C; 179 S; 127 T;
                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                     : 83
                                                                                                                                                                                                                                                                                                                                                                                                           240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Subjected to PIV amplification using primers corresp. to appropriate parts of the heavy or light chains and having restriction sites to perts of the heavy or light chains and having restriction sites to pertin cloning. The extension prods were isolated and separated. The recombinant human monoclonal and move (MAD) binds to a discontinuous opitope, in the HV 49226 eventuals, and neutralises a broad range of HIV isolates. The MAD may be used to treat immure deficiency, esp. at doses of 2.1-10 mg/kg.
                                                                                                                                                                         within the CDF regions of immnuoglobulins heavy or light chains that

It also codes for a variable region recognising Fs.aeruginosa F4 and H1 types. The Ab can be used for immunologic control of infection caused by Ps.aeruginosa. The antibody is made effective against various classes or

subclasses of resistant Ps aeruginosa by recombining corresp DNA 1-chain contg. versatile_coding_region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This encodes a yearable chain and can be connected to a gene encoding a constant region which determines optional IgG subclass. This can be used to study subclasses, and as an antigen for prepg. IgGI or IgG3 antibody. Pegions 325-372 connected to 540-571 encode the L chain, regions 572-856 encodes V can and region 875-895 encodes J chain. Sequence 1011 BP; 237 A; 263 C; 254 G; 257 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            584 acgcagtetecaggeaecetgtetttgtetteaggggggaagageeaeceteteetgeagg 643

DNA fraqments containing V-mappa segments from positive phage clones were subclaned into plasmid vectors. Variable gene segments from the resulting clones were sequenced and functional clones were selected on the basis of open reading frames, intert donor and acceptor splice sites and intact recombination sequences. The sequences obtained from four different plasmid clones were designated p65.3, p65.5, p65.8 and p65.15 (see Q44122.34425).

DNA fragment vk65.8, containing variable kappa chain gene.
Variable: kappa chain; gene segment; human; DNA fragment; vk65.8;
unrearranged; light chain; miniloous; transgene; transgenic; mouse;
production; heterologous; antibody; gamma; immunoglobulin; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             day mouse embryo pronuclei, to generate an unrearranged light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    minilocus transque. The resulting transquence man be used for the production of heterologous (i e human) antibodies against preselected antiques, this comprises immunishing a mouse with a preselected antique and collecting antique binding heterologous human gamma immunoglobulins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the variable kappa chain gene segment containing human DNA fragment, vk65 8, which was co-injected along with the human DNA fragments vk65.3, vk65.5 and vk65.15 into half

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure: Page 73-74; 109pp; English.

The nucleoride sequence of F105 VK (Q42707 - sequence differs from other F105 VK sequences given elsewhere in the specification) was compared with germline gene HumvK325 (Q42706), showing 97.78 similarity. By nucleotide sequence analysis, F105 appears to be derived from a member of the VK III subgroup gene family.

Sequence 390 BP; 86 A; 115 C; 102 G; 87 T;

Discipling HIV infection
Discipling HIV infection
The nucleotide Sequence of F105 Vk (Q42707 - sequence differs from other F105 Vk sequences of F105 Vk (Q42707 - sequence differs from other F105 Vk sequences given elsewhere in the specification) was sompared with germline gene Humk325 (Q42705), showing 97 7% similarity. By uncleotide sequence analysis, F105 appears to be derived from a member of the Vk III subgroup gene family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Monoclonal human rheumatoid factor - obtd by prodn, and secretion of hybridoma obtd. from cell fusion of human bone marrow derived lymphocyte and P301 mouse myeloma cell bisclosure; Page 5; 7pp; Japanese.

The sequence shown encodes the variable region of the light chain of a human monoclonal antibody theumatoid factor YESG. The gene may be isolated from the bone marrow soln, of a rheumatoid arthritis patient and used to produce hybridomas, allowing prodn. of the rheumatoid arthritis factor at constant quality in large quantities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C: Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                    Blood samples were collected from patients immunised with allergens including ragweed (Ambrosia elator) extracts. The dominant allergen in short ragweed is Amb a 1. Purified PBLs were immortalised and
                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                            Antibody material associated with ulcerative colitis - comprising antineutrophil staining patter antibody, characterised by perinuclear neutrophil staining patter and the staining patter and staining pattern (panch and sociated with clearative colitis (UC) was recombinantly produced and characterised using a phage display technique. Libraries of VH-and VL-encoding DNA homologues having the immunoreactivity of UCPANCA antigen were created. Recombinant UCPANCA Fab clones 5-3
                                                                                                                                                                                                                                                                          and 5-4 were generated (see also W07613-16). These can be used in methods for screening for UCpANCA and for isolating UCpANCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 contg. allergen specific IgA for treating mucosal tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               then fused with mouse myloma cell line 553 and the resultant clones were screened using Amb a protein. A single cell sublone AL 16-5.2, secreting Amb al-specific 1gG4, kappa antibody was selected. Total RNA was prepd. from the AL 16-5.2 cells and first strand cDNA was pred. using oligo dI primers. When the first strand cDNA was the template, and the 5' and 3' kappa light chain primers (665540, ereplate, and the 5' and 3' kappa light chain primers (665540, noted). The DNA sequence of several subclones contg. this amplified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    73 gocagteagaetgitageageaactaettageetggiaecageacaaacetggeeagget 132

                                                                                                                                                                                                                                                                                                                                                                                                                               DNA fragment was determined. The sequence and its deduced AA sequence are shown in Q65538 and R55286. Comparison of the deduced AA L6-5.2 L-chain sequence with human V region sequences indicates that the AL 16-5.2 L-chain is a member of the human VK III subgp. Sequence 325 RP; 79 A: 79 A: 79 G:

Pred. No. is the number of results predicted by chance to have a score greater than or right to the sorre of the result being prince).

and is derived by analysis of the total score distribution.
